

Integrated virtual care for cardiometabolic health

Three in 5 Americans have one or more chronic conditions like diabetes, hypertension, and obesity. If the current trend continues, that number is expected to grow to 4 in 5 in the next 15 years.¹ Chronic conditions cost American employers billions in healthcare and lost productivity per year. And their most common comorbidities — anxiety, depression, back and joint pain — increase the costs even more.

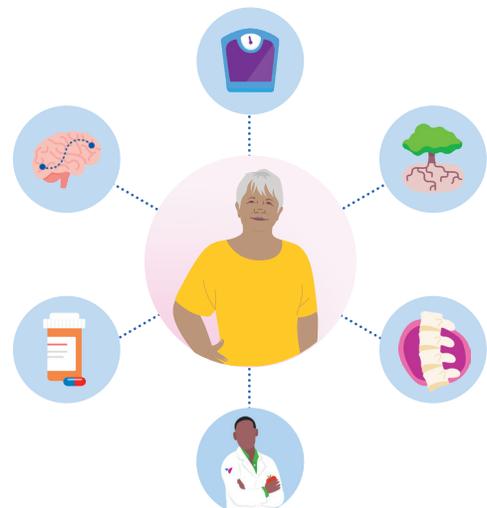

Vida’s integrated virtual care

Integrated care reduces costs

While many employers invest in virtual care solutions, most of those solutions target only a few conditions and treat them in silos. Vida’s integrated care model addresses the full range of cardiometabolic challenges and their contributing factors in one app with one care team.

With Vida, organizations can empower members to prevent and manage the most comprehensive set of chronic conditions in one place while increasing access and engagement and reducing risks and costs.

How does Vida work?

Every member's care plan is developed by a human provider, supported by AI, integrated with the broader healthcare ecosystem, and adaptable as individual needs change.

Hyper-personalized and culturally adapted care pathways reach your entire population

Vida evaluates medical, lab, and pharmacy claims data to create a complete picture

Vida screens everyone for physical and mental health conditions and social determinant risks

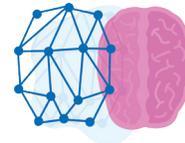

Clinical nutrition guidelines that outline dietary consideration, preferred eating patterns, and mealtime customs for 25+ cultures

Human-led care, enhanced by technology, keeps members engaged, accountable, and on track

Members choose expert providers based on relatable characteristics, and areas of focus or expertise and build deep 1:1 relationships

Machine learning personalizes insights and prompts based on behaviors and metrics, then delivers interventions supported by artificial intelligence

Fully integrated care drives better experience and outcomes

Vida integrates with benefit ecosystems using human Care Navigators and automated in-app content

Members address multiple conditions together with one connected care team

Clients achieve results that pay for themselves
